EMPLOYMENT

FRONT END WEB DEVELOPER

NXT DIGITAL SOLUTION

JUNE 2016 ONWARDS

ROLE
<p>As front end developer at NXT I've worked directly with the design team to produce full front ends at spec, within time restraints, for our clients. Our typical technologies on the front end include: SCSS (SASS), HTML, CSS, JavaScript, JQuery. On the back-end we're fully .NET working with a variety of CMS and custom projects.</p> <p>I've also worked with back end teams to integrate my templates and ensure that no bugs develop in the process. As part of this process I've spent time learning C# & .NET basics and understanding how to use Umbraco (and to a lesser degree a custom inhouse CMS) properly. This has also freed up resource elsewhere in the company, saving the company time and money.</p> <p>Whilst here I have also been given opportunities to project manage the front end development of projects, which has included delegating work, managing stakeholder expectations, and focusing on beating deadlines. It's also been a major focus this past 6-12 months to streamline development for clients by building components to be as reusable as simply as possible.</p> <p>As well as working on greenfield projects I've completed maintenance work for a variety of clients, which has exposed me to older technologies such as classic asp, XLST, non-framework websites (eg, no bootstrap or similar). My duties during this work have also been to advise the project management teams on time needed, requirements we'll need (eg, new designs, certain paid for libraries, etc) and anything else we might need to produce the best work possible for the client and quote effectively, preventing budget overrun.</p>

UI DEVELOPER

POCKIT

JANUARY 2015-APRIL 2016

ROLE
<p>Working in the front end with a .NET (ASP MVC5, Razor Pages) stack and standard web technologies (HTML, Vanilla CSS, JS). Other standard technologies include Bootstrap, JQuery and Angular.</p> <p>Since joining I've also worked extensively on optimising the clientside, updating all sites to being fully responsive, and migrating the codebase to SCSS (sass). Other tasks included implementing new features, installing analytics including eCommerce tracking, and some basic design duties. Until February 2015 I was the sole front end developer, responsible for the front end of pockit.com and secure.pockit.com as well as all javascript responsibilities - for example node APIs.</p> <p>At Pockit I was introduced to Agile principles, and we used weekly sprints and daily standups, as well as using feature branches - and where possible requiring two other stakeholders to approve a feature branch to be merged back into Master.</p> <p>Miscellaneous duties included site speed optimisation (resulting in drops from >30 seconds load times to between 3 & 5 seconds), and liaising with multiple departments (eg, marketing).</p>

JUNIOR WEB DEVELOPER

SATMAP SYSTEMS LTD
MARCH-DECEMBER 2014

ROLE
<p>My role at Satmap included: Web Development and Programming</p> <p>The majority of my time at Satmap has involved redeveloping their website which included extensive HTML, CSS and JavaScript changes. I also helped develop new features, such as a "Map Picker" tool and an "Offer Wizard."</p> <p>I also found time to get to grips with SASS (SCSS), and become very capable with Bootstrap. Another skill that has been key to my development has been learning version control - Satmap uses Git and Github, which I'm now fairly accustomed to.</p> <p>eCommerce Management</p> <p>Satmap uses Magento for eCommerce and website management as well as Amazon Seller Central for more exposure. My responsibilities have included creating CMS pages and blocks and making changes to the core theme as well as to the themes of the plug-ins used on the website. I also have helped with general administrative tasks such as product creation and maintenance, creating and managing discount campaigns and sales, and other routine tasks.</p> <p>General SEO</p> <p>I was given the task of managing Satmap's search engine optimization (SEO) on my own which has included article research and creation and using a knowledge base and Wordpress blog to publish articles. I rewrote existing copy to better reflect Satmap's purpose and managed Webmaster tools which included fixing HTML and link issues. This also provided me the opportunity to manage keyword campaigns in Google Adwords.</p>

WORK EXPERIENCE

SELBY COLLEGE
JUNE-JUNE 2010

ROLE
<p>I worked at Selby College as part of a work experience program offered by my high school. The role involved providing IT support which included maintaining computers, printer maintenance, and setting up computers for online exams. I performed these tasks mostly self-managed in a fast paced professional environment but also as part of a team.</p>

QUALIFICATIONS

TERTIARY EDUCATION

SELBY COLLEGE

2011-2014

QUALIFICATION
BTEC Level 3 Extended Certificate in IT
