## EMPLOYMENT

### FRONT END WEB DEVELOPER

### NXT DIGITAL SOLUTION

JUNE 2016 ONWARDS

| ROLE |
|------|
| As front end developer at NXT I've worked directly with the design team to produce full front ends at spec, within time restraints, for our clients. Our typical technologies on the front end include: SCSS (SASS), HTML, CSS, JavaScript, JQuery. On the back-end we're fully .NET working with a variety of CMS and custom projects.<br><br>I've also worked with back end teams to integrate my templates and ensure that no bugs develop in the process. As part of this process I've spent time learning C# & .NET basics and understanding how to use and integrate my views with Umbraco (and to a lesser degree a custom inhouse CMS).<br><br>Whilst here I have also been given opportunities to project manage the front end development of projects, which has included delegating work, managing stakeholder expectations, and focusing on beating deadlines. It's also been a major focus to streamline development for clients with a focus on reusable components across multiple components.<br><br>As well as working on greenfield projects I've completed maintenance work for a variety of clients, which has exposed me to older technologies such as classic asp, XLST, non-framework websites (eg, no bootstrap or similar).<br><br>My duties have also included providing estimates on time required for projects, potential road bumps we need to be wary of and mitigate for, and any requirements we may need. |

### UI DEVELOPER

### POCKIT

JANUARY 2015-APRIL 2016

| ROLE |
|------|
| Working in the front end with a .NET (ASP MVC5, Razor Pages) stack and standard web technologies (HTML, Vanilla CSS, JS). Other standard technologies include Bootstrap, JQuery and Angular.<br><br>Since joining I've also worked extensively on optimising the clientside, updating all sites to being fully responsive, and migrating the codebase to SCSS (sass). Other tasks included implementing new features, installing analytics including eCommerce tracking, and some basic design duties. Until February 2015 I was the sole front end developer, responsible for the front end of pockit.com and secure.pockit.com as well as all javascript responsibilities - for example node APIs.<br><br>At Pockit I was introduced to Agile principles, and we used weekly sprints and daily standups, as well as using feature branches - and where possible requiring two other stakeholders to approve a feature branch to be merged back into Master.<br><br>Miscellaneous duties included site speed optimisation (resulting in drops from >30 seconds load times to between 3 & 5 seconds), and liaising with multiple departments (eg, marketing). |

JUNIOR WEB DEVELOPER                                    SATMAP SYSTEMS LTD

                                                        MARCH-DECEMBER 2014

| ROLE |
|------|
| My role at Satmap included:<br>Web Development and Programming<br>The majority of my time at Satmap has involved redeveloping their website which included extensive HTML, CSS and JavaScript changes.  I also helped develop new features, such as a "Map Picker" tool and an "Offer Wizard.<br><br>I also found time to get to grips with SASS (SCSS), and become very capable with Bootstrap. Another skill that has been key to my development has been learning version control - Satmap uses Git and Github, which I'm now fairly accustomed to.<br><br>eCommerce Management<br>Satmap uses Magento for eCommerce and website management as well as Amazon Seller Central for more exposure.  My responsibilities have included creating CMS pages and blocks and making changes to the core theme as well as to the themes of the plug-ins used on the website.  I also have helped with general administrative tasks such as product creation and maintenance, creating and managing discount campaigns and sales, and other routine tasks.<br><br>General SEO<br>I was given the task of managing Satmap's search engine optimization (SEO) on my own which has included article research and creation and using a knowledge base and Worpress blog to publish articles.  I rewrote existing copy to better reflect Satmap's purpose and managed Webmaster tools which included fixing HTML and link issues.  This also provided me the opportunity to manage keyword campaigns in Google Adwords. |

WORK EXPERIENCE                                         SELBY COLLEGE

                                                        JUNE-JUNE 2010

| ROLE |
|------|
| I worked at Selby College as part of a work experience program offered by my high school.  The role involved providing IT support which included maintaining computers, printer maintenance, and setting up computers for online exams. I performed these tasks mostly self-managed in a fast paced professional environment but also as part of a team. |

# QUALIFICATIONS

TERTIARY EDUCATION                                   SELBY COLLEGE
